

Correus electrònics

Descripció

L'aplicació de correus electrònics s'utilitza per rebre, consultar i respondre correus des dels comptes configurats dins de SaltOS4. Actua com un client de correu integrat simplificat, compatible amb la lectura de missatges via POP3 o IMAP, visualització de metadades i contingut, i resposta mitjançant servidors SMTP interns o externs.

Cada missatge es mostra com una targeta visual a la vista de llista, amb camps clau com remitent, assumpte, data i un fragment del cos. Els correus es poden visualitzar en detall, respondre o eliminar. Aquesta aplicació està estretament integrada amb el mòdul de Comptes de correu electrònic i és essencial per a la gestió de comunicacions entrants.

Vista de llista

La vista de llista mostra els correus entrants com a botons o targetes clicables. Cada entrada mostra habitualment:

- Capçalera: Resum visual utilitzat per representar el missatge a la interfície.
- Data i hora: Data i hora de recepció o enviament del missatge.
- Assumpte: Títol o línia d'assumpte del correu electrònic.
- Fragment: Avanç extractat de l'inici del cos del missatge.
- Adjunts: Llista d'arxius adjunts amb opció de descàrrega.

La interfície també inclou filtres i un formulari de cerca per remitent, assumpte, compte i data.

Visualització del missatge

Aquesta vista mostra el contingut complet del correu, incloent metadades de la capçalera i adjunts.
