

Tokens Log

Description

The Tokens Log application tracks the usage of authentication tokens across the system. These tokens are typically used in API calls, automated scripts, or temporary login sessions. This module allows administrators to monitor access to the system and detect potential misuse or unauthorized attempts.

The following fields are displayed in the list view:

- User: User associated with the token.
- Created: Date and time when the token was created.
- Token: The token string used for authentication or access.
- Active: Indicates whether the token is currently valid and usable.

View entry

This view displays all information related to a specific token access.

[illegible]

It includes:

Delete

Token log entries are not meant to be deleted manually.

They form part of the system's audit and access control history, and are subject to automatic cleanup if configured.
