

Certificates

Description

The Certificates application is used to manage and track SSL/TLS certificates stored or monitored by the system.

This module allows administrators to register certificates, store metadata, monitor expiration dates, and ensure that security infrastructure remains up-to-date.

It is especially useful for managing certificates for custom domains, internal services, or external integrations.

List view

The following fields are displayed in the list view:

- Certificate nicknames available:: List of certificate aliases already stored and available in the system. It is not a database-driven table, but a visual display of loaded certificates.

Form view

This view is used to add, review, or update certificate information.

In **create** mode, the form is empty and ready to enter new data.

The form includes the following fields:

- **Certificate file (.p12, .pfx):** File input used to upload one or more certificates in PKCS#12 format. Required to import certificates into the system.
- **Password file:** Password used to decrypt the uploaded certificate file. This field is required and not autofilled for security reasons.

- Name: Display name or alias of the certificate.
- Info: Technical details of the certificate, including issuer, expiration, and subject. Displayed in a read-only text area.

Delete

Certificates can be deleted if no longer relevant.

However, it is recommended to retain expired entries for audit purposes.
